# Seed Treatment Confusion

Planting Blind: Why Some Farmers Don't Know What's on Their Seeds

3/27/2020 | 6:02 AM CDT

By [Emily Unglesbee](#), DTN Staff Reporter

Connect with Emily:

[@Emily\\_Unglesbee](#)

As seed treatment offerings become more common and complex, it has become harder for farmers to know exactly what pesticides are used on their crops. (DTN photo by Pamela Smith)

ROCKVILLE, Md. (DTN) -- With seed treatment use on the rise, farmers and regulators are becoming hard-pressed to keep track of the rising number of pesticide ingredients added to seeds before planting.

As companies bundle more active ingredients together and treat seeds farther upstream from the farm, growers' knowledge of their personal on-farm pesticide inputs is becoming less accurate, a new study found. And they're not alone -- U.S. regulators don't have good data on how many pesticides are used in seed treatments, either.

The result is that many farmers may be using more pesticides than they realized -- and perhaps more than they need -- at a time when profit margins are slim and uncertain.

## WHAT'S ON YOUR SEED?

Most seed treatments consist of a fungicide, insecticide,

## US Attorney charges Minn. farmer with cheating elevator

By Mikkel Pates  
Agweek Staff Writer

HERMAN, Minn. — Federal prosecutors have charged a western Minnesota farmer with conspiring with grain elevator employees to get paid for more grain than he was delivering.

Bryan Dallas Crandall, 36, of Herman in Grant County is charged with one count of conspiracy — colluding with co-conspirators at the CHS Inc. elevator from 2013 through 2017.

The government is seeking up to \$355,517.46 in a money judgment and a right to other forfeitures. Crandall is awaiting a July trial in a separate state case where he is accused of cheating a vulnerable adult in a farmland deal in nearby Traverse County.

U.S. District Judge Ann Montgomery in Minneapolis had scheduled Crandall for an initial appearance, arraignment and change of plea hearing for Friday, June 18, but was delayed on Thursday, June 17. Crandall told Agweek he would decline comment on the cases and said the federal hearing had been delayed because of a family emergency.

Prosecutor Robert Lewis, in court documents filed May 27, said Crandall sold grain to a number of grain elevators, including the CHS elevator in Herman,

Mikkel Pates / Agweek

Herman, Minn., in Grant County has a population of about 437. It is home to a CHS Inc. elevator where federal prosecutors say a farmer, Bryan Dallas Crandall, 36, colluded with co-conspirators to pay him for more grain than he delivered.

for unusual circumstances such as a truck not being properly positioned on the scale," Lewis said. "Manual entries, however, were rare and would automatically create a notation in the CHS computer database."

Specifically, from about Aug. 5, 2013, to about April 25, 2017, Crandall "cooperated and conspired with two employees of the CHS elevator in Herman." The conspirators, identified in the report as co-conspirators A and B, "fraudulently inflated the records of his delivery of corn and soybean, by having the co-conspirators make manual entries in the elevator computer and cause Crandall to be paid as if he had delivered

A, to communicate the "amount of fraud proceeds being kicked back" to the co-conspirator "from a recent fraudulent trade."

### Improper land deal

Separately, Crandall is involved in a state case in Traverse County, Minn., where state prosecutors allege two counts of financial exploitation of a vulnerable adult. In that case, slated for trial on July 27 in Wheaton, Minn., the state says Crandall purchased farmland on a contract-for-deed and made three modifications.

The land seller, identified as "AJM," in 2010 took over management of the family's affairs after her husband's

an ATV accident, and remains paralyzed from the waist down, putting her in hospital or assisted living facility ever since. She passed cognitive tests, but a judge said she met the definition of "vulnerable" due to her infirmity and need for assistance, during two subsequent modifications.

Regardless of initial terms, the state says it was two final modifications that were illegal.

► On Nov. 20, 2014, Crandall's attorney drafted another contract modification, signed by AJM at an assisted living facility where she was recovering from a surgery the day before. This modification lowered the purchase price by 22% to \$867,380. It added a provision that if AJM died during the (30-year) contract, Crandall

would pay "\$250,000 or the remaining balance whichever was lower." AJM was "paralyzed and morbidly obese" and signed the documents while "heavily medicated." She signed the documents "without receiving any considerations" and with unexplained rationale.

► On April 23, 2015, AJM signed a deed granting fee title to the land — effectively paying a single lump sum of \$350,000 for land with a tax assessed value of \$1.5 million.

Both transactions resulted in AJM's four children not receiving any land. Six weeks later, on Aug. 12, 2015, a judge granted conservatorship over AJM because she was "not paying her medical expenses and had made several questionable business decisions."

By **Chris Clayton**, DTN Ag Policy Editor

Connect with Chris:

[@ChrisClaytonDTN](#)

A USDA inspector examines pork carcasses. More meatpacking plants are starting to see challenges tied to the COVID-19 pandemic. At least two Iowa

OMAHA (DTN) -- Coronavirus cases are increasingly affecting the meatpacking industry as both a beef and pork plant in Iowa were closed this week because of positive cases.

Tyson Foods announced a pork processing plant is suspending operations at an eastern Iowa plant after 24 positive cases were tied to its workforce. National Beef also announced it was moving up a major cleaning process at the Iowa Premium Beef plant in Tama, Iowa, after a worker tested positive.

The meatpacking industry is deemed as essential by the federal government as part of the need to keep food processing going, but that also places staff and workers in constant close quarters that go against the social-distancing standards now in place around the country.

# Old grain elevator ready to rock

Sask. band turns prairie skyscraper into a rehearsal space and venue where local musicians can hold private concerts

BY WILLIAM DEKAY  
SASKATOON NEWSROOM

ASQUITH, Sask. — Nearly a century of grain dust and chaff has been loosened by the thumping rhythm of an electric bass guitar inside Asquith's last standing grain elevator.

Not since thousands of trucks and millions of tons of grain passed over its weigh scales has the old wooden sentinel resonated with such purpose.

Nicknamed The Vator, it has become a second home of sorts for the rock band Fusarium.

For Mike Vidal, 26, Owen Gerrard, 26, Brett Arnelien, 26, and Darian Dutchak, 24, it's a place to jam and a place to grow as musicians. The four friends have been playing together since high school.

"The first time we brought our big setup in with the giant bass amp that looks like a fridge, (the dust) started snowing down and it was even hard to breathe," said Vidal, who plays guitar and vocals.

Added Dutchak, the band's drummer: "It was just like a powder coming down on me. But it's gotten better because every time we have the big setups, it rattles more and more and less falls each time."

Vidal's father, Joe, chief executive officer of Bioriginal, the company that owns the elevator, created the opportunity for the young rockers to have a long-term space in which to make some noise.

The Saskatoon-based company supplies nutritional ingredients to the food and nutraceutical industries.

Bioriginal bought the elevator in 2001 from Viterra to store flax seed and borage but it's been sitting empty as a result of new food regulations imposed about eight years ago.

A Canadian National Railway train rumbles by Fusarium band members Owen Gerrard, left, Mike Vidal, Brett Arnelien and Darian Dutchak. The sights and sounds around the Asquith, Sask., grain elevator provide band members with inspiration for their music, song writing and recordings. | WILLIAM DEKAY PHOTOS

"There's some ambiance that comes from the sound reflecting off the wood and filling up this whole room, like a cathedral sort of sound. It almost acts like a giant speaker. And when you're in there listening to these bands with the big setups, it fills up this whole space and the sound is reflecting off all the wood. It's not a sterile studio where everything's sound treated and dampened to absorb all the sound. It reflects all the

Vator Sessions, a series of private concerts where local bands performed while being filmed and recorded for YouTube. Microphones and cameras were also brought outside to incorporate the audio and visual of trains passing by.

"It's a way to bring that to the live music scene that people might not otherwise get this year. People can now see and hear these bands playing on YouTube in a grain elevator

# Coverage of dicamba EPA case and its impact

## Dicamba Registrations Vacated

The Ninth Circuit Vacates Three Dicamba Registrations

6/4/2020 | 11:26 AM CDT

By Emily Unglesbee, DTN Staff Reporter

Connect with Emily:

@Emily\_Unglesbee

The use of dicamba on Xtend crops in 2020 is suddenly in legal jeopardy, after the Ninth Circuit issued a ruling vacating the registration of three dicamba herbicides, effective immediately. (DTN photo by Pamela Smith)

This article was originally posted at 8:08 p.m. CDT on Wednesday, June 3. It was last updated at 11:26 a.m. CDT on Thursday, June 4.

\*\*

ROCKVILLE, Md. (DTN) -- The U.S. Court of Appeals for the Ninth Circuit issued a decision Wednesday vacating the registrations of three dicamba herbicides, XtendiMax (Bayer), Engenia (BASF) and FeXapan (Corteva). The ruling does not appear to include Syngenta's Tavium dicamba herbicide.

The ruling has enormous implications for farmers this summer, given that roughly 60 million acres of dicamba-tolerant cotton and soybeans were slated for 2020 planting, with the expectation that farmers could use dicamba over the top for weed control.

Much legal wrangling likely remains ahead, but the consequences for weed control this summer could be

serious if the ruling stands, said University of Illinois weed scientist Aaron Hager.

"Given that there are many thousands, if not millions, of Xtend acres that have not been treated yet, if this label is fully vacated right now and there is no appeal and stay from the courts, farmers will have to scramble to come up with alternative solutions," he said.

When asked what this ruling means for legal use of dicamba in 2020, an EPA spokesperson could only tell DTN by email that "EPA is currently reviewing the court decision and will move promptly to address the Court's directive."

At least one dicamba registrant, Bayer, has vowed to fight the ruling and try to mute its effect on farmers this growing season.

"We strongly disagree with the ruling and are assessing our options," a company statement emailed to DTN said. "If the ruling stands, we will work quickly to minimize any impact on our customers this season. Our top priority is making sure our customers have the support they need to have a successful season."

Coverage of COVID-19 impacts on South Dakota ag industry

# SPECIAL REPORT: Regulatory gaps and missed opportunities allowed COVID-19 to spread freely in U.S. meatpacking plants

By: Bart Pfankuch and Nick Lowrey | April 29, 2020

The COVID-19 pandemic has overwhelmed the U.S. meatpacking industry, but public health experts say the risks posed to workers and the U.S. food supply chain by airborne viral infections were readily apparent and could have been addressed years ago.

Ongoing virus outbreaks could have been avoided, and future illnesses eliminated, if major meatpacking plants had implemented disease-control measures recommended by the U.S. Centers For Disease Control and Prevention long before COVID-19 was first identified. The plants only began implementing such measures after workers started to get sick and die from the disease.

Now, as workers at shuttered plants are likely to return to work soon under a presidential order, federal regulators continue to suggest rather than require companies to implement basic safety measures, such as separating workers by six feet or more, promoting hand washing,

## Report reveals rapid shift in food business

By: [Laura Rance](#)

Posted: 3:00 AM CST Saturday, Dec. 12, 2020

### OPINION

Jambalaya will be one of the more pleasant memories I'll associate with 2020.

Specifically, how I learned to make a spicy pasta version that closely replicates a dish we often ordered when we joined friends for Pasta Tuesdays at a local restaurant. That is, before COVID-19 changed our social life.

Hopefully, 2021 will mark a return to dining out once in a while. Although the home-cooked dish is a perfectly edible stand-in, I like my jambalaya best when it's cooked by someone else and served with a heaping dose of camaraderie.

Neither of those options was prudent this year and so, like many Canadians, I spent more time learning new culinary skills, tending a garden and stocking my pantry and freezers with local food.

**Laura Rance**

*Winnipeg Free Press*

## H.M. COLUMN

*Perceptive in-depth look at how Covid-impacted Canadian food consumers and spurred food chain innovations. But the writer failed to reveal her Jambalaya recipe which she tantalized readers with to open the article.*

# Canadian agriculture deserves a true export policy

By **Ed White**

Reading Time: 3 minutes

Published: July 23, 2020  
Markets

It's high time Canada embraces an export competitiveness policy for agriculture.

In fact, in 2017 the Canadian government embraced the goal of increasing agrifood exports by almost 50 percent by 2025, to \$75 billion.

That's good because it provides farmers, the food industry and everybody involved in agriculture with the confidence that it is an officially supported sector of the economy.

But it's not enough and that goal has been getting undermined by apparently unthinking acts of federal and provincial governments operating without a plan.

For example, the federal government has provided significant and vocal support for the plant protein industry, with investment from the protein supercluster, Export Development Canada and other federal money supporting efforts to get Canada on top of the new and promising industry.

Yet it is simultaneously imposing profitability-squeezing costs like the carbon tax on some elements of agriculture, threatening the viability of canola by proposing the banning of some pesticides, and adding

High winds affected a widening swath of farm country, according to this image created from DTN wind data. (DTN graphic)

As the DTN/Progressive Farmer Digital Yield Tour, powered by Gro Intelligence, expands each year, we're increasingly wowed by the power of modern yield modeling systems.

That power, and the partnership between DTN and Gro, was on full display early this week as we began to assess the path of the infamous derecho that struck corn country from Iowa to Ohio. That this horrible weather event hit right in the middle of our Digital Yield Tour gave us a lot to react to: First, we counted our blessings that this is a digital/virtual "tour" and we didn't have human yield scouts checking fields in the derecho's path; second, we were uniquely poised to focus on what this windstorm may mean to crop production at a very timely period.

DTN weather experts Nick Lesser and John Baranick jumped in within hours and created a wind path map, focusing on the areas of damaging winds shown by DTN weather data. That information was handed off to the Gro team of Kelly Goughary, Jacques Paye and Steve Bernardi,

## Value role of every link in food supply chain

By: [Laura Rance](#)

Posted: 4:00 AM CDT Saturday, Jun. 6, 2020

### OPINION

Amidst all the disruption, the suffering and the fear, the one good thing you could say about our ongoing experience with COVID-19 is that it has peeled back the layers of our society to expose the raw — and sometimes unpleasant — truths about what we truly value.

When childcare workers can earn more income through the Canada Emergency Response Benefit (CERB) than they do at their jobs, we have a problem. When our elders are housed in facilities that cannot adequately provide for their care, we have a problem.

When the people who produce our food can't find enough workers to help them get that job done, we have a problem.

Each of these issues is layered in complexities, but at their core, it comes

*Good, clear commentary on the uncomfortable truth the pandemic exposed regarding the unmet supply and demand between Canadian agriculture and student labor.*

**NAAJ 2021**

## Farmer-owned AAFC?

**I**n 2019 Canadian farmers grossed almost \$37 billion from crop sales. Each started with a seed.

That's why getting farmers to pay more for plant breeding – often referred to as "value creation" – is important. It's also contentious.

Nobody wants to pay more and a lot of farmers worry royalties will enrich seed companies more than farmers.

Around \$180 million a year – \$100 million from the private sector and \$80 million from governments and farmers – is invested in Canadian crop variety development annually, according to the 2018 JRG Consulting Group study. It says Canadian certified annual seed sales are around \$2.6 billion. That's seven per cent of variety development funding.

By some estimates, Canada needs to double cereal- and pulse-breeding spending to stay competitive with other major grain exporters.

The seed trade contends that its Variety Use Agreement, which charges the farmer a fee to plant saved seed, and which is being tested as a pilot project, will benefit both private and public breeders, and ultimately farmers through better varieties.

Most farmers acknowledge they benefit from new crop varieties. Some even concede they should contribute more, but remain wary.

Farmers are almost always price-takers on the inputs they buy and crops they sell, and seed is a major input. For canola seed, which all comes from private firms, it represents almost 25 per cent of total estimated 2020 operating costs, according to Manitoba Agriculture and Resource Development (MARD).

By comparison, wheat seed – mainly developed by Agriculture and Agri-Food Canada (AAFC) with public and farmer money – represents about 11 per cent of operating costs.

MARD estimates farmers will earn a 5.4 per cent return on canola and 4.7 per cent return on wheat this year.

While canola is usually more profitable than wheat, farmers commonly complain canola seed is too expensive.

Farmers also have long memories.

"I cannot stress enough that amendments to the plant breeders' rights act allows for farmers to retain the right to save, clean, and store seed for their own operations," they were told in February 2015 by Gerry Ritz, the federal minister of agriculture at the time. "There seems to be some confusion around that."

Five years later the seed industry wants a royalty on farm-saved seed.

Farmers would still be allowed to save seed from varieties not covered by UPOV '91, but for how long? Seed officials say unprotected varieties will be available so long as farmers buy them, but the record shows some seed firms have discontinued varieties, arguing the replacements are better.

Some varieties get deregistered. Farmers can still grow them but buyers are obliged to apply the lowest grade for the intended class.

In 2012, Canadian farmers were permitted to start saving seed from Roundup Ready 1 soybeans after the patent expired, but finding them wasn't easy. One retailer confided he wouldn't sell them because he'd be cutting his own throat.

Monsanto also said its new soybeans were so much better that farmers

## Lack of child care makes the rural house of cards wobbly

Opinion  
Jennifer M.  
Latzke

It's something that not many people acknowledge out loud, but rural economies are houses of cards built on agriculture and natural resources, manufacturing and small Main Street businesses.

Rural economic development types in sparsely populated counties know their communities are one crisis away from falling apart. A natural disaster, a market downturn or a trade imbalance, or a black swan event like COVID-19 and it doesn't take an expert to see the house of cards start to get a little wobbly. That's why communities have long figured out that creating opportunities for better standards of living for families in their small towns is actually good for agriculture and businesses as well. Ensuring that

there is available, quality child care for working families is now at or near the top of the list.

But still, there are those in community leadership positions who scoff that this is a threat to the business economy. They say this is a private family issue and local and state governments and businessmen shouldn't intrude.

Frankly, they're wrong.

In researching this week's cover story, I spoke with dozens of mothers, rural economic development folks and others who are raising the alarm over rural child care. Time and space on the page didn't allow me to put them all in, but the experiences they shared deserve a voice.

For various reasons, some parents didn't want to go on the record with their stories. The competition for child care openings in rural areas is so fierce, among the licensed and unlicensed providers alike, they were concerned that they'd lose their children's placements by speaking on the record.

I heard from young professionals—the very ones we actively recruit to our rural commu-

nities to work in our hospitals, schools and businesses. But with crushing student loan debt, some of these two-income families are having to choose between having another child and that childcare price tag, and being able to pay their current bills. Let alone being able to save for their children's college funds and their own retirements. One mother told me her child care bill was about as much as a house payment for her and her husband.

With many blue-collar families, and single parent families, the price of child care can overwhelm a family budget. As so many in the field explained, shift work jobs don't have a lot of leeway for absences and tardiness because the drop off line at daycare was running slow. These families routinely use their vacation and sick leave to take care of children if their providers have to close. And during COVID-19, many of these providers had to close for quarantining, leaving these families in a sudden lurch.

Time and again, I heard from mothers who said they had to choose between a rock and a hard

place. Do I go back to work and leave my child with this unlicensed provider so we can continue to pay our bills? Do I risk leaving my child in this licensed facility, with its precious opening that we finally got after two years on a waiting list, even though my gut tells me my child is not thriving there? Is my child forgoing precious enrichment at the critical stages of their development because our only option doesn't offer it?

Do we have children at all?

In the last instance, I heard from one young married couple that has chosen to not have children due to cost and distance to the nearest available facility. Others in the same position told me that the decision to have children or not have children because of the price of child care has strained their marriages to the point of divorce.

The issue is more complex than this meager space allows me to fully explore. We still haven't touched on the families who have children with special needs and their limited options. We haven't mentioned the plight of

our homeless and working poor families. Or how many licensed providers are quickly approaching retirement age with no replacements in sight. Or how financial and regulatory hurdles prevent some child development professionals from relocating and starting businesses in rural counties.

And while some are finding creative solutions, the progress is slow and it's filled with pitfalls. Some are working with large businesses in their communities to share the cost of childcare with their employees or to subsidize childcare facilities. There's been a push in some counties to build community childcare centers to fill the gaps for families. There are even recruitment initiatives to bring qualified childcare professionals to rural counties.

It's still not enough to address the crisis. To be quite blunt, it's past time to get this rural economic house of cards in order.

Our neighbors are counting on us.

An Industrial Policy Lincoln Would Like

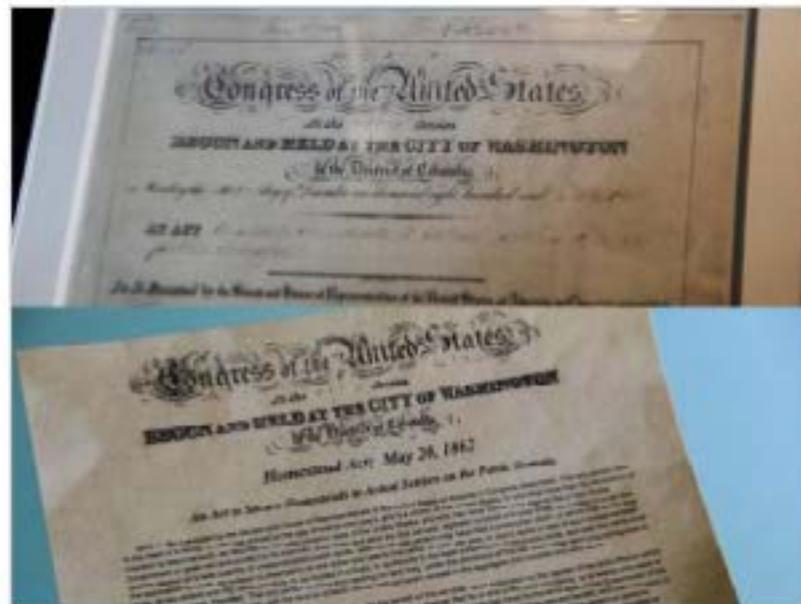

7/20/2020 | 2:25 PM CDT

By **Urban C. Lehner**, Editor Emeritus

Connect with Urban:

@urbanize

In 2012, the United States marked the 150th anniversary of the Homestead Act of 1862 by temporarily loaning for public display the original document signed into law by President Abraham Lincoln. The rare complete document was shown at

In the days before Donald Trump, when Republicans stood for laissez faire economics and small government, "Industrial policy" -- specifically, whether the United States should have an industrial policy -- was a controversial question.

Today, both presidential candidates believe in industrial policy. Both want to use the power of government to try to restore America's supremacy in manufacturing. Joe Biden's industrial policy differs from Trump's in important ways, but no matter who wins the U.S. will have an industrial policy.

As the Incumbent president, Trump has already enacted his policy, which is centered on tariffs. (Trump has also pushed tax cuts and deregulation, but that's economic policy more than industrial policy.) Biden's plan would have the government spend \$400 billion on a "buy American" campaign and \$300 billion on research and development and "breakthrough technologies." ([https://joebiden.com/...](https://joebiden.com/))

**Americans are anxious to return to** normalcy after the coronavirus shut down the economy and our way of life. What the new normal looks like is still being determined.

There are no clear answers to our many questions as we weigh our personal health with our fiscal health. For agriculture, the pandemic has exposed several vulnerabilities. Solutions will require thoughtful dialogue not only within the industry but with all levels of government. Putting financial aid packages aside, here is a sample of challenges the coronavirus has brought to the forefront:

**1 Fix kinks in the food supply chain.** Last month's column praised the resiliency of the ag industry and its partners for keeping food on grocery shelves. Since then, we've seen numerous meat/poultry processing plants idled or operating at reduced capacity as thousands of workers tested positive for COVID-19. The disruption has left producers without anywhere to sell their livestock and likely will lead to temporary meat shortages in grocery stores. Meanwhile, dairy farmers and fruit/vegetable producers have seen demand from institutions plummet with the closing of restaurants, hotels and schools. As a result, some producers have had little choice but to euthanize animals, smash eggs, dump milk or plow crops under, leading to devastating revenue losses.

Supply isn't the issue. But, the nation's food

equipment, coronavirus testing and the slowing of processing lines so proper social-distancing measures can be implemented.

On the retail side, the president and CEO of Albertsons food stores put it best when describing the challenges created by the coronavirus: "When you operate in a just-in-time [environment] and have a tight supply chain, it doesn't allow you to accommodate for situations like this [a pandemic]," Vivek Sankaran stressed in a recent podcast hosted by Secretary of Agriculture Sonny Perdue. "We should all reflect as an industry and think about how to build redundancy as we go forward."

**2 Close the digital divide.** The coronavirus has reemphasized how essential reliable broadband is to our everyday lives and well-being. According to a 2019 report from the Federal Communications Commission, 39% of rural areas lack broadband access (25 megabits per second) compared to only 4% of urban areas. The president and Congress have raised the prospect of an infrastructure bill to create thousands of jobs but have so far failed to reach an agreement. Any legislation should include enough funding to connect all of rural America to the rest of the world.

**3 Boost medical resources.** The struggles of the rural health-care system are well-known: the lack of access to doctors and other medical professionals, longer travel times to

## Wild rice business takes family for wild ride

**On the Farm:** Harvesting the crop from northern Saskatchewan lakes relies on the weather and comes with highs and lows

### ON THE FARM

**MUIRHEAD FAMILY**  
Meeyomoot Lake, Sask.

**BY SEAN PRATT**  
SASKATOON NEWSROOM

Larissa Muirhead has witnessed the wild side of the wild rice business.

The venture started off with a bang in 2015 and 2016 when her family agreed to a share-cropping arrangement with the previous owner of the operation on Meeyomoot Lake in northern Saskatchewan.

“They were the highest producing years in wild rice history,” she said.

“They were huge years, like massive yields off of that lake.”

Forest fires were burning out of control in northern Saskatchewan. The tinder dry conditions were ideal for producing wild rice.

The family harvested a whopping 180,000 pounds of wild rice their first year in the industry.

“We just saw exactly what we could do with a business like this,” she said.

The excitement wasn’t all about

The end result is in the bag for the Muirhead family and their crew at Against the Grain Organic Wild Rice. | SUPPLIED PHOTOS

the potential to make money. Larissa recalls gazing at a full moon during her first night at the camp.

She and her husband, Chase, watched the moon “peel off” the

tops of the trees on the far side of the lake as it ascended into the night sky.

“I was sitting on the harvester and I said to him, ‘yep, I want to be here.

This is what I want to do. I love this,” said Larissa.

“There is just something about that place that is so magical. It’s untouched and it’s just so beauti-

winds combined to wreak havoc on the operation.

They harvested less than 100 bags of product that fall, which is the equivalent of one morning’s bounty during the two previous years.

To make matters worse, they had to contend with the damage caused by some industrious beavers.

“They dropped two massive poplars onto the harvesters. They’re made out of aluminum so they just snapped in half,” said Larissa.

This year was another wretched year due to high water levels. They harvested a paltry 5,500 lb. of wild rice in 2020.

The shareholders of the business are Larissa and Chase, Chase’s parents Garth and Cosette and his sister, Katy, and her husband Derek Charles.

They all live in La Ronge and have jobs outside of the wild rice business. Larissa is a lab assistant with the University of Saskatchewan’s College of Nursing program.

Garth agreed that the family venture has been a roller-coaster ride so far. They are familiar with both extremes of the business.

The year after they assumed sole ownership a plow wind toppled a boat and felled more trees, damaging some of the cabins.

Another boat sunk during harvest. And there have been plenty of other challenges, such as transporting supplies over a slush-covered lake during the winter.

“It’s an adventure,” said Garth.

“We could have a reality show I’m sure. A person needs to wear one of

*The entire Muirhead family, rather inexperienced in the way of agriculture, is going to attempt to gather wild rice. They experience devastating crop losses in the third year, and find itchy jobs and sucky jobs and spiders as big as one’s hand. The family discovers ways to stay afloat. ... I will appreciate my next bowl of wild rice.*

# One man's mission is to save the turkey by opening a school for fowl

Alice Mannette The Hutchinson News

**Alice Mannette**  
*Hutchinson [Kansas] News*

## H.M. PROFILE

“

*Good description of both a man and an animal – the turkey. Reading to the end we find the crux of the profile: as a little boy Frank Reese led turkeys to the field and then back home, and as a first grader he wrote “Me and My Turkeys.” An interesting story of his present operations — his early inspiration led him to this point.*

Frank Reese holds one of his Bronze Tom heritage turkeys at his 160-acre farm, Good Shepherd Turkey Ranch, near Lindsborg. "My whole mission is genetic preservation and biodiversity, I am trying really hard to save these birds from extinction," Reese said. *Sandra J. Milburn/HutchNews*

Rhonda Larson farms with her family near East Grand Forks, Minn. She's also a substitute teacher and a national leader of U.S. Wheat Associates. Here, she does late-fall cultivation on the farm. **Cover:** Rhonda Larson is active in all aspects of the farm, particularly marketing and management. Photos by Jaryn Hemiston / Agweek

## MINNESOTA WOMAN FARMS, TEACHES, PROMOTES US WHEAT WORLDWIDE

By Jonathan Knutson  
Agweek Staff Writer

**R**honda Larson — farmer, substitute teacher and national commodity group leader — tells this story of a classroom experience that gives a taste of her diverse life.

"We were in school, and they had Career Day and one little girl was dressed up and she said, 'What am I?'" Larson answered, "A cowgirl!" No, the girl responded, "I'm going to be a farmer!" Larson thought,

substitute teacher, also serves as national vice chairwoman of the U.S. Wheat Associates, often known as USW, which promotes U.S. wheat around the world. She's now slated to take over as chair in the summer of 2022; initially she was scheduled to take the top spot this summer, but the coronavirus pandemic pushed back her ascension.

"These are crazy times for everyone," she said, stressing that she enjoys her varied roles.

As Larson tells it, she was born into farming, came late

Ralph Larson Farms of East Grand Forks. Her father, Ralph, 92, is retired, but her brothers, Dan and Dean, remain active in the family farm. Her son, Bryce, is part of the operation, too.

Her father's twin brother, Ray, also farmed, and his children — Rhonda's cousins — farm, too. The cousins still help each other with farm work when needed.

Rhonda Larson graduated from the University of Minnesota with a bachelor's degree in public administration and a juris

Rhonda Larson's diverse career includes serving as a substitute teacher, primarily at South Point Elementary in East Grand Forks, Minn. Larson, right, stands in front of the school and talks about

## H.M. PROFILE

“

*This could have simply been a brief about the next head of the US Wheat Associates but instead we learn about the woman. We learn that she born into farming, came to substitute teaching late and landed her new role unexpectedly and how each of those experiences lend themselves to her mission in life.*

## In Family We Trust

*A history of supporting one another and seeking outside experts helps keep this farm business moving forward.*

### The ability of longtime farm

owners to let go of control of a family operation and transition it to a new generation can be a “learned behavior,” if southwest Ohio’s Bryant Agricultural Enterprise is any indication. The 19,000-acre corn/soybean/wheat farm near Washington Court House is moving solidly into its third generation, with an experienced eye toward the fourth and beyond.

On a late-June morning, the third-generation’s Heath Bryant, 37, is in the machine shed with nearly a dozen employees trying to gauge what work can be accomplished. Rains that have delayed and prevented planting on thousands of acres all spring have finally dissipated, and there is wheat to be harvested and soybeans that need to go into the ground.

They decide to go ahead with wheat harvest and soybean planting in certain locations where the soil seems solid enough to permit machinery.

Nearby is Kasey Bamberger, 27, Heath’s cousin and day-to-day comanager of the operation. Their fathers, Mark Bryant, 54, and Mike Bryant, 60, had run the farm for years in partnership but have gradually yielded the operation’s management to their children.

but not to dwell on them, and to support each other, learn from the mistakes and move on.”

### EYE ON EXPERTS

The transition of the farm to their children is part of a plan on the part of Mark and Mike, and their wives, Kim and Christy, respectively. The transitions have been easier because the Bryants have a long history of seeking expertise wherever they can find it to help make decisions about the business.

Here are the primary examples:

- Kasey and Heath’s grandparents, John and Patsy Bryant, joined an input-buying group in the late 1970s, and the farm is still a member today. The member-owned organization has also spun off grain marketing and crop insurance companies.

- Not only did the two younger cousins get work experience off the farm before coming back, so did Kasey’s father. All three say the experience was key to how they approach the business.

- Brothers Mark and Mike hired a non-family operations manager 15 years ago when they realized neither of them was particularly suited to the job.

- The family’s planning for succession and the transfer of the business were conducted with the help of an outside mediator. The discussions for the farm

## H.M. PROFILE

“

*As a family operation moves into its third generation, we meet two cousins who use their differing talents to make it work. ... We get to know these two young managers, including what they’ve learned about themselves, as well as practical information that might help other families plan.*

# MOTHER NATURE RULES

So why not follow her lead? That's how Seth Watkins revamped his farm's system.

By Gil Gullickson • Executive Editor, Crops Technology

Seth Watkins used to be the type of farmer who prompted agricultural industry executives to salivate, akin to a German Shepherd eyeing a juicy steak. “I went to agronomy meetings,” says the Clarinda, Iowa, farmer. “I went to Farm Bureau meetings. I did everything the universities told me to do. I focused entirely on production, raising more and more.”

After all, Watkins figured it was his duty to help feed the world's 7.8 billion people, no matter what happened.

Well, something happened.

Watkins had just finished shepherding his cowherd through a “humdinger of a blizzard” during the heart of calving season in March 1998. After several days of scraping with snowdrifts and stinging winds, he asked a pivotal question:

**“Why was I working against Mother Nature instead of with her?”**

## REFLECTION

Watkins wondered why he began calving in February.

“The thinking was that you'd then have time to plant your corn and do other things in April,” he says. “It just never seemed right to me. I didn't like seeing mud

get into the creeks. I didn't like seeing cattle uncomfortable, or a baby calf nursing a cold, muddy udder.

“I'd go to meetings and they (industry representatives) would say, ‘We have an antibiotic for this, or you can build a bigger calving shed,’” he says. “I mean, who was I to question them?”

But Watkins did question them.

He questioned why, in his all-out quest to produce more beef and more grain, he was losing money.

“I was spending \$5 to make \$3,” he says.

He questioned why the fragile soils in his area of southwestern Iowa were annually losing 15 to 20 tons per acre – far above the allowable NRCS annual loss rate of 5 tons per acre.

He questioned how his farming methods may have contributed to his region's health and economic woes.

“We're at the bottom of five watersheds where I live in Page County,” he says. “It consistently has one of the highest per capita cancer rates in Iowa. No one asks why.

“The other one that breaks my heart is our poverty rate,” he adds. From 2014 to 2018, for example, the Iowa Data Center pegged Page County's poverty rate 40th out of 99 counties. He says this filters down to the region's school children.

“We've seen 46% to 68% of the kids in our schools on free and reduced school lunches,” he says.

## ON-FARM STEPS

There's an old Chinese proverb that states, “A journey of a thousand miles begins with a single step.” Like this saying, Watkins figured that starting to solve these problems began with his own farm.

“It sounds kind of corny, but I said to myself, ‘I just want a system that gives me happy cows, clean water, and healthy soil,’” he says. “If I go broke doing that, so be it. At least I can sleep at night because I did right by the cows.”

Watkins grew up on 240 acres that's now part of a 3,300-acre mix of owned and rented pasture and cropland. He and his wife, Christy, outright own 150 of the 600 cows in a herd, with the rest owned on shares ▶

Gil Gullickson  
Successful Farming

## 3 PROFILE

“

*Common are the stories of farmers who've had all the success and praise to land on a pedestal surrounded by those who want their business. But by the third paragraph, we're told something happened. ... That's when we go on the journey to learn how to have 'happy cows, clean water and healthy soil.'*

## Grappling With a New Farm

Young, Black, First-Generation American Determined to Succeed as a Farm Owner

8/24/2020 | 3:26 PM CDT

By **Chris Clayton**, DTN Ag Policy Editor

Connect with Chris:

[@ChrisClaytonDTN](#)

Zemua Baptista, 22, stands in front of his eight broiler barns outside of Seward, Nebraska. A first-generation Black American, Baptista is a new young face in Nebraska production agriculture. (DTN photo by Chris Clayton)

FRIEND, Neb. (DTN) -- Like a lot of children growing up in a small Nebraska town, Zemua Baptista remembers playing with tractors in the living room as a boy -- "carpet farming," as he describes it.

"My mom would always get mad at me over it," he said. "I just always knew I wanted to be a farmer. It's always been what I grew up around and spent all my time doing."

Baptista's dream of becoming an owner of a farm came true last winter when he got his first delivery of broiler chicks from Lincoln Premium Poultry for the eight barns Baptista was able to get built near Seward, Nebraska. Lincoln Premium started contracting with roughly 80 farmers, mainly in eastern Nebraska, to raise broilers for a processing plant that opened in September last year in Fremont, Nebraska.

Zemua (Zem-wah) Baptista was among the first prospective farmers to approach Lincoln Premium Poultry

## Operation Evolution

*The tractor cab may be in for a makeover, realigning for a future as a rolling office when driving is an afterthought.*

**Engineers consider the view and the ability to** swivel, head clearance and shock absorption, and who could forget lumbar support? There's no detail too small when it comes to designing the seat and the cab on a piece of ag equipment.

"The appearance of the seat leads to comfort," says Tilo Kefer, with one of the industry's leading seat-design companies, Grammer. "Even the color is comfort. If you like the seat, you feel more comfortable sitting in it."

Tractor and combine cabs have come a long way since "comfort" was defined by how a rear settled into a molded steal seat. But, even after Bluetooth-capable sound systems and information-packed LCD monitors have become common, the cab, a farmer's throne,

### A VISION OF THE FUTURE

Deere proposes the Command Cab. "It's our vision that, as we go toward more automation and ultimately autonomy, the role of the operator goes away from direct control and more toward supervision both in the field you're in and management of your entire fleet," says Josh Hoffman, Deere's lead for user experience and industrial design.

The Command Cab is an LCD-laden cocoon of productivity.

One wide LCD spans across the user's chest packed mostly with on-sight information such as the machine's progress in the field, application rates and speed. Problem with the planter? There's an alert for that and so much more.

There's another wide, narrow LCD above the forehead, this one featuring information on everything from GPS coordinates to weather reports to the actions of a farm's drone fleet or the progress of another tractor working on a different task in a different field.

*John Deere built its Command Cab concept to manage not just the tractor in the field but the whole farm.*

A video call may pop up from home checking to see when dinner should be ready or from the employee asking what to tackle next. There could be alerts and suggestions, as well, perhaps from a camera drone

CROPS

Part of the burgeoning CBD industry, hemp growers (from left) William 'Ick' McCraw, Kelton 'Pepper' McCraw, and Brian Lyda are the force behind Hendersonville, North Carolina's HempOtye. The McCraws are co-owners and Lyda is the master grower for their 25 acres of hemp in 2019.

# HEMP TAKES HOLD

Farmers and industry hustle to ramp up production to keep up with demand.

By Des Keller

**B**road-shouldered and barefoot, Brian Lyda trots into a rain-softened 6-acre hemp field near Hendersonville, in mountainous western North Carolina. Mud is splattered up his calves as he turns back a fourth of the way into the rows. "This plant loves attention but not too much attention, if that makes sense," says Lyda, gesturing to the 2-foot-high hemp plants growing under plastic in rows 6 feet apart. After all, hemp – and its cousin, marijuana – can grow and thrive on their own in road ditches. "Growing hemp is like raising kids," says Lyda, chuckling. "You don't want to be in their business too much, but you do step in

according to a recent Gallup poll. While the positive anecdotes about CBD keep rolling in by the thousands, they aren't yet backed up by scientific studies. Numerous food and drink companies are reportedly awaiting an assumed Food and Drug Administration approval of CBD in products for human consumption. As it is, CBD product makers can't technically make any health or wellness claims. Market research firm Brightfield Group estimates CBD sales in the U.S. were \$600 million in 2018 and will increase by more than 700%, to \$5 billion this year. The market could grow to more than \$23 billion within four years, according to Brightfield. The demand growth has jolted prices.

off the entire 4- to 5-foot plant at the stalk near the ground. The boom in the hemp-CBD business is national. There were an estimated 80,000 acres of hemp grown in 2018 in the U.S., and that number has at least quadrupled this year to 320,000 acres, according to the National Hemp Association. Growers, processors, and retailers – experienced or otherwise – are joining the rush. The North Carolina Industrial Hemp Association has about 400 members made up of processors, extractors, and retailers, along with 250 of the state's 1,100 approved hemp growers.

**A Fun Business** "This business has exploded in one year with the passage of the new farm bill," says Jeanine Davis, Extension specialist for herbs, organics, and specialty crops with North Carolina State

# SPECIAL REPORT: Regulatory gaps and missed opportunities allowed COVID-19 to spread freely in U.S. meatpacking plants

By: Bart Pfankuch and Nick Lowrey | April 29, 2020

The COVID-19 pandemic has overwhelmed the U.S. meatpacking industry, but public health experts say the risks posed to workers and the U.S. food supply chain by airborne viral infections were readily apparent and could have been addressed years ago.

Ongoing virus outbreaks could have been avoided, and future illnesses eliminated, if major meatpacking plants had implemented disease-control measures recommended by the U.S. Centers For Disease Control and Prevention long before COVID-19 was first identified. The plants only began implementing such measures after workers started to get sick and die from the disease.

# DICAMBA ON TRIAL

Midwest Center for Investigative Reporting

## Dicamba on Trial

German agribusiness companies Bayer and BASF face allegations in a civil lawsuit that they created circumstances that damaged millions of acres of crops by the weed killer dicamba in order to increase profits from a set of new dicamba-related products offered for sale beginning in 2015.

A trial of the lawsuit, originally filed in November 2016 by southeastern Missouri peach farmer Bill Bader, began Jan. 27, 2020, and is expected to last two to three weeks. The lawsuit initially named Monsanto, which was acquired by Bayer in 2018.

The Midwest Center for Investigative Reporting is one of the few media outlets covering each day of the groundbreaking trial as part of an in-depth project on dicamba, its makers and its impact.

This project is supported with a grant from the Fund for Investigative Journalism ([www.fij.org](http://www.fij.org)).
